

Graph embeddings (GE) - project assignment

Environment for enhanced performance evaluation of selected graph embedding algorithms, which should include:

- The comparison of at least 3 embedding systems/algorithms,
- The comparison provided for at least 4 datasets,
- The comparison should involve at least 2 different tasks, e.g. classification or recommendation (link prediction),
- The quality evaluation for hypergraph-based node embeddings obtained using [Cleora](#): provided for the selected dataset(s) preprocessed to the Cleora input format, and involving comparison of different numbers of Random Walk steps (from 3 to 7).
